

Saving the planet one bed at a time.

Introducing Soy-Based Foam.

Our revolutionary, new flexible foam product is derived from natural renewable resources, reducing our dependence on petrochemicals.

BETTER SLEEP, BY DESIGN.™

It's All About Responsible Choices.

Soy-based foam is an innovative, new flexible foam product derived by combining natural renewable resources. Since it is manufactured from natural seed-based oils such as soybean, this foam significantly decreases the dependence on fossil fuels like petroleum, and ultimately lessens greenhouse gas emissions. In today's environmentally conscious world, any process that helps reduce one's carbon footprint is a positive step.

Advantages of using soy-based foam vs. petroleum-based polyols:

- *Eliminates odors*
- *Greater comfort level*
- *Exceptional hand-feel*
- *Superior UV stability*
- *Stable consistency and density*
- *Lasting durability*
- *Renewable and plentiful*

Soy-Based Foam is Comfort

Luxurious comfort standards are maintained and even enhanced with the use of unique alternative renewable resources. With soy-based foam, it is easy to make a responsible choice without sacrificing sleeping comfort.

Saving Energy and the Environment

The energy consumption to manufacture foam from bio-based materials is significantly less than what is required for traditional petroleum-based processes. When fewer pollutants are released into the air, greenhouse gas emissions can be substantially reduced, helping to protect the environment.
